Statement of Reasons for Allowance

1. The present claims are allowable over the "closest" prior art Cooper (U.S. 2,869,194) and Meyer (U.S. 4,264,760) for the following reasons:

Cooper discloses method of curing phenol-formaldehyde composition comprising resole and powdered magnesium oxide. However, there is no disclosure or suggestion of ammonium thiosulfate as required in all the present claims. Further, Cooper discloses curing the phenol-formaldehyde composition at 250 - 600 $^{\circ}$ F, i.e. 121 – 315 $^{\circ}$ C, or higher which is in direct contrast to the present claims that all require curing at 10-110 $^{\circ}$ C.

Meyer discloses method of curing composition comprising aldehyde containing polymer such as phenol-formaldehyde and sulfur oxyacid such as ammonium thiosulfate. However, there is no disclosure that the phenol-formaldehyde is resol phenol-formaldehyde as required in all the present claims. Further, there is no disclosure that the composition consists essentially of resol phenol resin, alkali earth metal oxide and/or hydroxide, and ammonium thiosulfate as required in all the present claims. Additionally, Meyer discloses that curing occurs during hot pressing of the composition, however, there is no disclosure in Meyer of curing time with the exception of the examples. The examples disclose curing at 310 $^{\circ}$ F (154 $^{\circ}$ C), 330 $^{\circ}$ F (166 $^{\circ}$ C), and 350 $^{\circ}$ F (177 $^{\circ}$ C) which is in direct contrast to the present claims that require curing at 10-110 $^{\circ}$ C.

Thus, it is clear that Cooper or Meyer, either alone or in combination, do not disclose or suggest the present invention.

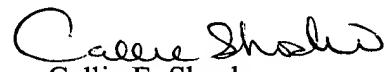

In light of the above, the present claims are passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
